PROJECTS

Name: Career Hub

[Live Link](#) | [Client Site Github](#)

Technologies Used : HTML5 | CSS3 | JavaScript ES6 | ReactJs | Tailwind Css | etc

- Job hunting related website. User can find a job. A user can see specific job details and apply job
- User can see his applied jobs from Applied Jobs route.
- Applied jobs I stored local storage.

Name: Chef Receipe Hunter

[Live Link](#) | [Server Site Github](#) | [Client Site Github](#)

Technologies Used : React Js | Firebase | Express Js | Vercel | Fetch API | etc

- Chef finding website. A user can create account email, google and github. login and logout after creating a account.
- If a user want to see chef receipe details, he must login first. I manage it with private route with loading state.
- After login user redirect where he want to go. In receipe details page, a user can mark recipe as a favorite.

Name: Toy Marketplace

[Live Link](#) | [Server Site Github](#) | [Client Site Github](#)

Technologies Used : React Js | Firebase | Express Js | Vercel | MongoDB | etc

- Online selling toy car. Create account with email and password. Google login is enable.
- After Login, user can add a toy and he see him added toy. And he can update and delete toy. I used mongodb database here.
- Only login user can see view details toy. Otherwise, he will redirect login page. I manage it with private route with loading state.
